**Subject:** Draft Permit Basic Information Technical Specification

Hi Alison,

Please find attached the draft of the ICIS Batch Permit Basic Information Technical Specification. To open the file, please change the extension from .zap to .zip. Note that the document references Attachment 1: Contacts and Addresses because permits have contact and address data. That is the same Attachment 1 that was recently delivered as a Final document as part of the Permitted Features technical specification deliverable. There have been no changes to anything in that attachment since it was delivered as Final, so I have not re-attached it to this email in an effort to avoid confusion. However, if you would like me to re-send that attachment for your reference, just let me know.

I have also attached the Deliverable Performance Checklist, which covers both the draft Permit Basic Information Technical Specification and the draft Unpermitted Facility technical specification. Please return a signed copy of the checklist upon receipt. (The draft Unpermitted Facility Technical Specification is being delivered in a separate email momentarily).

Please review this document and provide comments by September 24, 2009. Let me know if you have any questions. Thanks,  
Abby
